Dear Dean,

In this issue:

- [Aquatech Amsterdam Special Discount](#) on your next* PO for standard EDI products.
- Learn about SnowPure's success with our new EXL in China.
- EDICAD 3: with enhanced projections and a wider range of SnowPure's EDI products, including EXL. [Upgrade to Enhanced EDICAD 3!](#)
- Find out about [SnowPure at Aquatech 2011 in Amsterdam](#). [Ask about visiting us in Amsterdam](#). We will send you an invitation and an AMSTERDAM SPECIAL DISCOUNT!

SnowPure's Products

Did you know SnowPure offers the broadest range of EDI products on the market? Our products range from 10-20 lph Zapwater™ for labs to 8 m3/h (35 gpm) EXL products for power generation! Our wide range of product flow, numerous features, and various options ensure that SnowPure can provide its OEMs with the right tools required to meet their customers' EDI needs.

SnowPure also makes custom EDI products for special separations.

Michael on Water Technology

EXL Success in China

SnowPure introduced our high flow EXL product in China in 2009. On a recent trip to China, I visited a solar technology manufacturing plant near Shanghai that uses EXL for its ultrapure process water.

The system features 8 EXL-600 modules operating at 6 m3/h each, and has continually been producing 17.4 Megohm after 4 months of operation.

EXL System--48 m3/h

[Click here to request EXL information](#)

Improvement Tips from Ron and Brad

EDICAD™ 3: Software Upgrade, including the EXL product line!

SnowPure's EDICAD™ Projection Program assists OEMs in estimating the performance of the pure water integrated system during the design phase. The Program uses specific ion feed (from RO permeate estimate/analysis) to compute estimates of the variables critical to optimal design and operation. These estimates include: EDI product resistivity (Megohm.cm), silica content in ppb, expected electrical cost in USD (based on \$0.14/kWh), pressure drops, and more!

What's new to EDICAD™ v3.2:

- EDICAD™ 3 now projects for the high-flow EXL series and all other XL EDI products!
- OEMs may now choose the type of RO system:
 - RO+EDI (one-pass)
 - RO+GTM+EDI (CO2 reduction via Liqui-Cel GTM)
 - RO+RO+EDI (two-pass)
- New formatting to enhance data entry:
 - Splash screens automate entry of useful fields each time EDICAD™ 3 is opened
 - Warnings, Cautions, and Notes are more obvious
- Troubleshooting sheet email button. This button allows OEMs to input information on the page and then send it to Technical Service at SnowPure via email.
- Download Brochures! There is now a drop down menu on the input page that contains various product brochures.

This projection software is designed to help our OEMs and their customers improve the design of their EDI systems.
